".025" copper wall tubing now available for IEC fan coils

Don't miss out on jobs requiring this feature!

- Addresses specification requirement
- Available on IEC products with 1/2" tube diameter hydronic coils*
- Available by Special Feature Request (SFR)

IEC is pleased to announce a new option for our hydronic coils. All 1/2" diameter coils with 0.016" copper tube wall thickness can now be ordered with 0.025" copper wall tube thickness.

Many installations don't comply with recommended water treatments or water velocities resulting in coil failures. Increasing the tube wall thickness on hydronic coils could prolong the lifespan of a fan coil unit.

* - Reference our Sales Brochure for specific product availability, minimum order quantity and lead time information. Download the Sales Brochure [here](#).
