

Valve Package Enclosure Option Launch

New product features available to specify IEC Ceiling and Hi-Performance fan coils.

Valve package enclosures protect the assembly and components when factory-mounted valve packages are required. Access to all the valve components is simple with the rear and side access doors on the enclosure. Additionally, the enclosures come standard with 1/4" closed cell insulation, reducing moisture.

CPY valve package enclosure

HPY valve package enclosure

Product Availability

Rear facing Valve enclosures are available for the following IEC product families:

- Horizontal Ceiling - CPY
- Horizontal Hi-Performance - HPY

Same-side piping and controls are required with this option. Some valve package component restrictions apply. See Encompass or the price guide for details.
